Time	Speaker	
00:06	Joseph	Hi, I'm Joseph Shaules. I am the host of the Deep Culture
		podcast, where we explore culture and the science of mind.
		This is a podcast for people who move between different
		cultural worlds: living in another countries, learning to speak a
		foreign language, growing up in a multi-cultural family. We're
		going to be talking to people about their intercultural
		experiences. But, we're also going to dig into the science and
		the psychology of culture and mind.
00:37	Joseph	For example, does the way that the human mind works depend
		on cultural background? Does speaking a different language
		change your experience of the world? Are all human beings
		culturally biased? So, we're going to explore questions like
		these. They give us insights into our own minds. Maybe they
		can help us gain deeper intercultural understanding.
01:01	Joseph	This is the introductory episode, Episode 1. I'll explain what's
		coming up in this first season. And, I'll talk about the
		inspirational starting point for this podcast. The vision of
		Edward T. Hall.
01:28	Joseph	In the 1950's and 60's, there was this very optimistic image of
		technology and the future, flying cars and plastic furniture.
		When I was a child, I used to go to Disneyland every year. They
		had an attraction, I think they still do, the Carousel of Progress,
		which showed how technology is improving our lives. There
		was this rotating stage, and every time it turned, it would
		transport you through history so you could see this parade of
		technological progress.
02:07	Joseph	Then, in the 1990's, there was the end of the Cold War, and
		another wave of optimism about future. Information technology
		was going to make the world into a global village, and the 21st
		century would be a time of coming together.
02:40	Joseph	That's the sound of rain outside of my apartment here in Tokyo.

 We've had torrential rains this year, flooding all through the south of Japan with many people dying including some in a nursing home, who couldn't be evacuated in time. There is a global climate change crisis. It is a dark time around the world. We are in the midst of a global pandemic with millions suffering in every part of the world. The greatest suffering for people with the least. 03:14 Joseph A time when we need to come together to solve humanity's shared problems, but also a time of social unrest, divisive politics, structural inequality. The 21st century has not turned into a technological utopia, a harmonious global village. 03:58 Joseph But, you know who I find inspiring right now? It's Edward T. Hall. Back in the 1950's and 60's when people were looking forward to their flying cars and spaceships, Edward Hall recognized that the transformational technology of the future wasn't rockets or robots. It was globalized communication and information

the transformational technology of the future wasn't rockets or
robots. It was globalized communication and information
technology.
04:27 Joseph In 1959, he published "The Silent Language," considered the
starting point of the study of intercultural communication. Hall
was interested in how the unconscious mind is shaped by
culture, and that the core of his work is a foundational insight
which resonates 60 years after his first book.
05:00 Joseph Hall believed that deep forms of intercultural understanding are
harder than it might seem, that globalized communication is an
opportunity but it's also a challenge. For Hall, superficial
appreciation of other cultures is easy. It's interesting. But,
deeper intercultural understanding requires more than that.
Cultural difference is not just a set of customs. It represents a
different way of making sense of the world, of valuing, of being
ourselves.
05:42 Joseph Confronting deeper forms of cultural difference can be a shock.
We are forced to question things we've previous taken for

		granted. Hall understood that this is difficult, it can be
		threatening. But, as we expand our view of the world, we
		expand our mind. We transform our perceptions. Hall
		understood that humans are cultural beings, and that, to
		understand diversity, we have to first start by looking more
		deeply into ourselves.
06:24	Joseph	So, this podcast will be bringing Edward Hall's vision into the
		21st century. We'll have six episodes. The first two will be
		conversations between me and my good friend and colleague,
		Yvonne van der Pol. We've both been working for many years
		in the field of intercultural education, training, consulting. We're
		going to talk about how we got into this work, where we see it
		headed. We're also going to talk more about Edward Hall, and
		how his insights anticipated by 50 years or more.
06:59	Joseph	The research that's going on now in fields like cultural
		neuroscience and cognitive psychology. Following that,
		Yvonne will continue to be with me for a series of episodes that
		start to look at some findings from the science of culture and
		mind. For example, we'll talk about brain imaging research that
		looks into how we experience the self. There is evidence that
		when a Chinese person thinks about their mother, their brain
		lights up as though they're thinking about themselves.
07:32	Joseph	When an American thinks about their mother, it lights up as
		though they're thinking about a stranger. What does research
		like this tell us? These are complex questions and even experts
		don't agree. But, that's all the more reason to dig into them.
		We'll also talk about the unconscious mind, how it's shaped by
		cultural patterns, and how this can help us understand things
		like culture shock.
08:00	Joseph	So, please join us. Subscribe. It helps us if you rate this
		podcast. Write a comment. Get in touch. Share your thoughts
		about being a cultural bridge person. You can reach us at
